# PlanTonic

## Key Benefits

04

Restore and rejuvenate the fertility of your land

05

Bring back the original taste of your fruits, vegetables, grains and pulses

06

Enhances crop production significantly and economically

# Visible Changes

- If the growth of the crop has ceased then healthy growth will commence
- Enhances and boosts flowering
- Prevents loss of flowering
- Threats and attack from disease causing pests is minimized at the flowering stage
- Losses occurring during the flowering to fruiting stage is also minimized
- Leaves start turning from light green to dark green
- Already existing leaves get bigger in size and so does the new upcoming ones
- There is all round growth and development of the crop which enhances yield

# Visible Changes

- The crops become healthy hence are able to resist and minimize attacks from threats
- After regular use of PlanTonic no need for any type of insecticide or pesticide
- Enhances production of female flowers
- Prevents yellow mosaic and similar problems happening on the leaves
- Along with the increase in yield the size of the fruits and vegetables is also increased
- There is an increase of around forty percent (40%) in the yield
- Enhances taste and color of the fruits and vegetables

# Preparation

- Take a barrel that can hold 120 litres of water.
- Take 2 kgs jaggery and put it in the barrel along with the 200 g **PlanTonic**.
- Stir well and keep the barrel in a shaded place. Keep stirring the solution at least twice a day for some time.
- Let the solution sit idle for 5 to 7 days.
- After 5 days the solution is ready for use.

120 lit. water

2kgs Jaggery

PlanTonic

Ready Solution

For 1 Acre pack  
200g

# Spraying Process

## For Farms

Take around 1 litre of this ready concentrated solution from the barrel and put it in a spraying pump with 15 to 18 litres of water. Spray thoroughly on the leaves and also on the roots at least 4 to 5 times during the life cycle of the crop.

# Preparation

- Take 1 litre bottle and fill it up with 80% water.
- Empty the PlanTonic pouch into it along with 50 g of jaggery.
- Close the lid and shake well and keep the bottle in a shaded place.
- If gases form, open the cap of the bottle to remove the gases.
- Shake the bottle at least once or twice a day. Keep the solution still for 5 to 7 days.
- After 5 days the solution is ready for use.

1 lit. water

50g Jaggery

PlanTonic

Ready Solution

For 15g pack

# Spraying Process

## For Home Garden

Take around 10 ml of this ready solution and put it in a spraying bottle with 1 litre of water. Spray thoroughly on the leaves and also on the roots at least once a week

## SEED TREATMENT PROCESS

Seed treatment is defined as the process to remove any type of chemical and harmful strains or coatings on the seeds and then applying the truly organic nutritional coating which greatly enhances and optimizes seed germination and provides a healthy growth to the plant and crops from the very first stage

**Note:** If the sowing is not yet done then do the following seed treatment process to get much better results.

First wash the seeds thoroughly with water to remove any type of chemical coatings or strains. Then spray the seeds well with the PlanTonic solution and keep for drying in a shaded place. After the seeds have dried up the sowing process can be started.

# Value Proposition

01

Only product specifically dedicated to the organic agricultural market and made from edible materials

02

A time tested and well seasoned product designed to deliver results over a gradual period of time

03

First “All-In-One” economical solution for either getting started or converting to organic farming
